MEASUREMENT DOCUMENTATION from a single source

The 'sense' makes the difference! In addition to the basic *jetStamp* 1025 model, REINER® offers an additional device solution for mobile measuring tasks and their immediate documentation as direct printing.

The *jetStamp* 1025 sense model offers maximum flexibility in the documentation of measured values. This model works without external, additional measuring devices. The required sensor (barcode scanner, V24-RS232 sensor adapter cable) is connected directly to the device. The *jetStamp* 1025 sense is therefore a closed measuring device with an integrated printer.

The recorded measured value can be printed directly and repeatedly on documents and other surfaces at the measuring location. The measurement results are documented immediately and therefore always remain tangible, visible and permanently traceable.
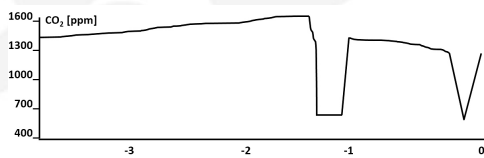

REINER® offers various accessories for the *jetStamp* 1025 sense, see accessories.

Expand your possibilities and print larger impressions with maximum precision!
